

ES2

ESS3

ES4

ES4 was a version that was designed to revolutionize Javascript. Ideas for classes, generators, modules, and many of the features that ended up in ES6 were introduced in what was dubbed the 'harmony' spec.

But just as the spec was nearing completion, trouble struck! A Microsoft's IE platform architect, argues that the changes would effectively "break the web".

ES4 was skipped straight to creating ES5 as an extension features found in ES3!
